## Career Objective

I am a university student graduate who recently completed a Bachelor of Science in Games Development paired with a sub major in Data Analytics. During my degree, I have maintained a distinction average, and gained a multitude of transferable and technical skills including web design & user interaction theory. I have used python, C# and C++ to program data structures, skeleton systems, and games development. Through the UX segments of my degree I am also competent in react and firebase. Thanks to my sub major I'm also experienced with Machine Learning, as I've built and integrated a CNN into web hosting through my degree.

I am hoping to gain experience in a unique workplace environment as well as develop my skills further in all possible departments.

---

## Education

**03/2020 – 11/2022**

University of Technology Sydney (UTS)- Bachelor of Science (Games Development)

---

## Career History

### Rides Operator, Luna Park
